

TANUSH BAMNOTE

Nagpur, Maharashtra

+91 9284443508 | tanushbamnote2@gmail.com | linkedin.com/in/tanush-bamnote | github.com/7H4N05

PROFESSIONAL SUMMARY

Cybersecurity focused Computer Science undergraduate experienced in malware analysis, offensive security, threat detection, and security infrastructure development. Skilled in reverse engineering, web exploitation, incident response, and security automation.

EDUCATION

B.Tech in Computer Science Engineering (Cyber Security)
St. Vincent Pallotti College of Engineering and Technology

Expected 2027
CGPA: 8.60

TECHNICAL SKILLS

Cybersecurity: Malware Analysis, Reverse Engineering, Web Exploitation, Vulnerability Assessment, Digital Forensics, Incident Response, Threat Analysis, Penetration Testing, Security Automation

Programming Languages: Python, C++, JavaScript, TypeScript, Bash, Perl, PHP

Security Tools: Burp Suite, Metasploit, Nmap, Wireshark, Ghidra, JADX, Apktool, Androguard

Backend and Infrastructure: FastAPI, Docker, AWS EC2, Linux Administration, SQLite, REST APIs

Systems and Hardware: ESP32, Arduino

EXPERIENCE

Cyber Police Nagpur | Cybersecurity Intern

July 2025 to August 2025

- Assisted in 300+ cybercrime investigations involving phishing, fraud, and malware incidents.
- Reverse engineered 25+ malicious Android APKs using Ghidra, JADX, and static analysis techniques.
- Contributed to development of APK Inspector, improving malware investigation workflows.
- Applied malware analysis, incident response, and penetration testing techniques to identify and mitigate threats.

PROJECTS

1. APK Inspector | Android Malware Analysis Platform

(Internal Project)

- Built full stack malware analysis platform automating APK decompilation, static detection, and forensic reporting.
- Integrated Apktool, JADX, and Androguard with heuristic based risk scoring using FastAPI, Python, and Docker.

2. SOC Platform | Security Operations Center

[Link]

- Designed centralized security monitoring platform for real time threat detection and incident response.
- Developed security event aggregation, threat analysis dashboards, and automated alerting using microservices architecture with Python and modern web technologies.

3. RiskShield | Risk Assessment and Vulnerability Management

[Link]

- Built comprehensive security risk assessment platform for vulnerability management and mitigation tracking.
- Integrated automated risk scoring, security analytics, and compliance reporting using Python and data analysis tools.

4. ESP32 Portable Pentesting Device

(Hardware Project)

- Developed portable ESP32 based wireless pentesting device for IoT and network security testing simulations.

5. CTF Infrastructure and Security Challenge Development

(Event Infrastructure)

- Designed and deployed scalable CTF infrastructure using Docker, AWS, and XAMPP supporting concurrent teams and secure challenge hosting.
- Developed offensive security challenges in web exploitation, binary exploitation, reverse engineering, and attack simulation environments for EncipherX 2025 and Phoenix Cybersecurity Club.

ACHIEVEMENTS

- 1st Place, YCCE Capture The Flag (CTF) 2025
- 1st Place, GHRCOE Capture The Flag (CTF) 2025
- 2nd Place, HicaThon Capture The Flag (CTF), SSPU Pune
- 5th Place, DefSec Con Capture The Flag (CTF)

LEADERSHIP

- Coordinator, EncipherX 2025:** Led 24 hour national level CTF event with 500+ participants and 20% year over year growth. Managed infrastructure deployment and challenge development.
- Admin, Phoenix Cybersecurity Club:** Oversee club operations, organize monthly security challenges and training sessions for 100+ active members.
- General Secretary, SADC:** Coordinate security and development initiatives, technical events, and industry collaboration programs.
