

TANUSH BAMNOTE

Nagpur, Maharashtra

+91 9284443508 | tanushbamnote2@gmail.com | linkedin.com/in/tanush-bamnote | github.com/7H4N05

PROFESSIONAL SUMMARY

Full-stack software engineer experienced in backend architecture, real-time systems, cloud infrastructure, and scalable application development. Skilled in Python, TypeScript, React, FastAPI, and DevOps technologies with expertise in building production-grade systems handling high throughput and concurrent operations.

EDUCATION

B.Tech in Computer Science Engineering (Cyber Security)
St. Vincent Pallotti College of Engineering and Technology

Expected 2027
CGPA: 8.60

TECHNICAL SKILLS

Backend Development: FastAPI, Python, Node.js, REST APIs, GraphQL, Asynchronous Programming, Microservices Architecture

Frontend Development: React 18, TypeScript, Tailwind CSS, Zustand, Tauri (Desktop), HTML5, CSS3

Databases: SQLite, MySQL, PostgreSQL, SQLAlchemy, Async Query Handling

Cloud and DevOps: Docker, Docker Compose, AWS EC2, Linux Administration, Git, GitHub, CI/CD

Programming Languages: Python, TypeScript, JavaScript, C++, PHP, Bash

Tools and Platforms: Pyrogram, FastAPI Uvicorn, Prometheus, Grafana, Psutil, PIL, OpenAPI

PROJECTS

1. TeleGallery | Production Grade Telegram Media Upload Platform [\[Link\]](#)

- Built scalable production system handling 500GB+ uploads with resumable transfers, automated batching, and multi-account failover achieving 99.7% uptime.
- Architected resilient upload orchestration using FastAPI, Pyrogram, SQLite, and Docker with crash recovery, exponential retry backoff, and adaptive FloodWait handling.
- Implemented real time monitoring dashboard using React 18, TypeScript, Zustand, and Tailwind CSS with live SSE event streaming and Prometheus metrics exporter.
- Designed self-healing reliability layer with health monitoring, failure detection, and AIMD-based adaptive congestion control.

2. SOC Platform | Security Operations Center [\[Link\]](#)

- Designed microservices architecture for centralized security monitoring with real time threat detection and incident response workflows.
- Developed event ingestion pipeline, threat analysis dashboards, and automated alerting system using Python and modern web technologies.

3. Traffic Police Management System | Full Stack Web Application [\[Link\]](#)

- Built comprehensive web application with vehicle registration, violation tracking, and payment processing using PHP 7.4+, MySQL 5.7+, and XAMPP.
- Designed relational database schema with user authentication, admin dashboard, CRUD operations, and role based access control.

4. APK Inspector | Android Malware Analysis Platform *(Internal Project)*

- Built full stack platform automating APK decompilation and forensic reporting using Apktool, JADX, Androguard with FastAPI backend and heuristic risk scoring.

5. RiskShield | Security Risk Assessment Platform [\[Link\]](#)

- Developed comprehensive security analytics platform for vulnerability management, risk scoring, and compliance tracking using Python.

6. CTF Infrastructure Development *(Event Infrastructure)*

- Designed and deployed scalable CTF infrastructure using Docker, AWS, and XAMPP supporting concurrent teams with backend challenge management and real time leaderboards.

ACHIEVEMENTS & LEADERSHIP

- CTF Wins:** 1st Place YCCE CTF 2025, 1st Place GHRCOE CTF 2025, 2nd Place HicaThon CTF, 5th Place DefSec Con CTF
- Coordinator, EncipherX 2025:** Designed and deployed CTF infrastructure serving 500+ participants. Led 24 hour national level event with 20% YoY growth.
- Admin, Phoenix Cybersecurity Club:** Oversee club operations, organize technical workshops, training sessions for 100+ active members.
- General Secretary, SADC:** Coordinate technical initiatives, development workshops, and industry collaboration programs.
